I am writing regarding the proposed development of a three-wind turbine project on land to the immediate north of our Melton Whiting Quarry.

As you may recall we undertook community consultation with local residents through our open day event in September last year. This event, and the online feedback we received for those unable to attend the event, showed a good overall level of support to the proposal which was really positive.

You were one of the people that provided comments back and indicated you were happy to be kept informed as the application progressed, hence this email.

Our application is now live on the East Riding of Yorkshire Planning Portal (<https://newplanningaccess.eastriding.gov.uk/newplanningaccess/>). By entering our application reference (22/01302/CME) or site address (Omya UK Limited, HU14 3HU) into the search box within the above link you can access all relevant information pertaining to our proposal.

To confirm, this formal planning application is for the same layout and scale of development as was originally proposed through the consultation event and online information boards.

If you have any queries you can approach our Agents – Locogen – directly. The best point of contact would be the Project Manager, Ian McLean,

Ian McLean - [ian.mclean@locogen.com](mailto:ian.mclean@locogen.com)

If you are of the view that the project is still a positive development then we would be very grateful if you were able to provide comments directly to the Council – ideally through the planning portal website.

As is the case for every UK energy consumer this is a particularly challenging time in relation to our energy spend and finding ways to improve our future energy security is paramount. Providing the business with a clean source of low-cost energy from wind is a crucial step to ensuring a sustainable and prosperous business at the quarry.

Kind regards,

Yours Sincerely  
Omya UK Ltd

William Hardcastle
